

Modernize your network with a single, converged SASE platform

Secure your network and every edge from one cloud-native platform

Most IT teams are juggling fragmented tools, outdated VPNs, and inconsistent security policies across every site. Cato's single-vendor SASE combines SD-WAN, Zero Trust access, and cloud-delivered security into one global platform.

Momentum brings it all together with a fully managed service, from deployment to ongoing policy management. You get faster performance, stronger protection, and complete visibility, backed by a partner who supports it for you.

HIGHLIGHTS

Run secure, high-performance networks that keep your teams moving

Full-stack security from day one: SWG, CASB, ZTNA, DLP, and IPS with no appliances

Global private backbone with 85+ PoPs for low-latency, SLA-backed performance

Fully managed by Momentum, from deployment and rule configuration to ongoing support

Rapid rollout at scale with zero-touch edge devices and simple onboarding

One unified platform to replace VPNs, MPLS, firewalls, and point security tools

Unify networking and security in one platform

Talk to a Momentum expert about Cato Networks SASE.

CATO NETWORKS SASE

How Cato Networks delivers true SASE from edge to cloud

Global private backbone

Connect users, sites, and cloud apps over Cato's SLA-backed private network with 85+ PoPs worldwide to improve performance, reduce latency, and eliminate middle-mile congestion.

Secure cloud access

Connect AWS, Azure, and other clouds using agentless IPsec tunnels, with full security inspection of cloud traffic and no virtual appliances or costly direct connect services.

Integrated security stack

Protect all traffic with cloud-delivered NGFW, SWG, IPS, CASB, DLP, and ZTNA. Inspection is continuous and consistent. No patching, point products, or blind spots.

Unified management console

Control security, networking, access, and user policies from a single cloud-native interface, eliminating tool sprawl with full visibility and centralized policy enforcement.

Secure remote access

Enforce identity-based access to apps and data across all users and devices. Eliminate VPN friction and ensure secure, policy-driven access from wherever your teams work.

Zero-touch deployment

Bring new sites online in minutes. Cato sockets auto-connect to the nearest PoP, pull down policies, and deliver full SD-WAN and security services with no on-site expertise required.

Why Momentum?
