MOMENTUM

CUSTOM BUILDS

Get the whole network built by one team

Hand the whole network buildout to one team

Custom builds usually mean a construction firm, multiple carriers, an integrator, and a support contract, each pointing at the next vendor when something breaks. Momentum handles the entire process, from laying the physical connection to engineering the services on top.

Most connectivity projects split across a builder, a carrier, an integrator, and a support desk. Momentum does all four. We lay fiber, splice it into long-haul networks we don't own, engineer the services on top, and keep it running when you want it managed.

HIGHLIGHTS

- Momentum lays fiber where no connectivity exists
- Engineers design the network across carriers, vendors, and clouds
- Finished builds convert to managed service with 24/7 monitoring
- Builds reach every location on Momentum's coverage map
- New fiber spliced into carrier networks for diverse long-haul reach
- One owner from the first trench to the first packet

MOMENTUM

CUSTOM BUILDS

What a Momentum custom build covers

Solution design

Engineers design the route, capacity, and services before construction starts.

Construction and permitting

Momentum handles right-of-way, permits, civil work, and splicing on every segment we build.

Carrier integration

Our fiber is spliced into other carriers' networks under agreements Momentum negotiates and manages.

Network services

We engineer lit capacity, private networking, and cloud connectivity on the finished route, across vendors.

Dedicated project management

One named project manager owns the schedule, the contractors, and every carrier deadline.

Managed service option

Finished builds can convert to managed service, monitored and maintained by Momentum's US-based engineers.

Why Momentum?

750+
CARRIERS AND SERVICE PROVIDERS

36K
ENTERPRISE LOCATIONS SERVED

8,000+
MANAGED NETWORK SOLUTIONS

Show us the site and we'll handle the rest

Tell us where connectivity needs to reach, and we'll come back with a design, a build plan, and a support model.
