

See your whole network in one view

Root cause on the first look

When an application slows down, network and security teams each see half the story. Global Control puts circuits, SD-WAN, and SASE performance in one login, so both teams work from the same picture and the cause is clear the first time.

What you know about your network is usually scattered across carriers, tools, and account teams. Global Control puts it in one place. Behind the portal is the same Momentum team that designs, builds, and supports your network, so the data comes with engineers who can act on it.

HIGHLIGHTS

Circuits, SD-WAN, and SASE performance side by side

Packet loss, latency, and availability across every carrier

Network and security teams reading from the same data

Usage per site and service, ready for scaling decisions

Connectivity checks at any address before you order

Invoices, tickets, and service updates in one login

Book a walkthrough of the portal

Talk to a Momentum expert about Global Control Portal.

GLOBAL CONTROL PORTAL

What's inside the Global Control Portal

Converged network view

Circuit and SD-WAN statistics side by side for every site on your network.

Circuit performance

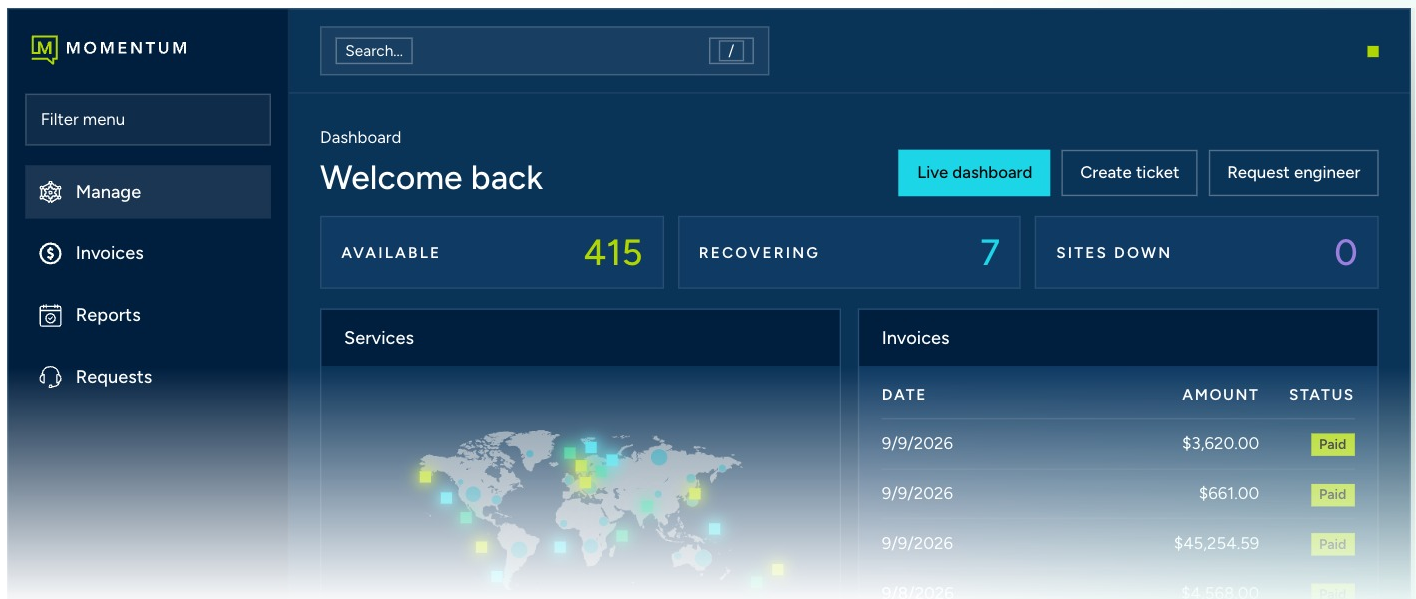

Connection health across every carrier, including packet loss, latency, and availability.

SD-WAN and SASE insight

Tunnel, policy, and security service performance in the same view as the circuits beneath them.

Usage and consumption

Per-site and per-service data that shows whether to scale up or down.

A network you understand is one you can grow

Book a walkthrough and see your circuits, SD-WAN, and security performance side by side.
