

NETWORK MONITORING

Put a 24/7 NOC behind every circuit you run

Hand off the carrier call for good

When a circuit drops, the clock starts. Someone has to notice, find the carrier, open a ticket, and push it through escalation. Momentum's NOC takes that job. Engineers watch every circuit around the clock and own each fault until the carrier restores service.

Momentum's engineering teams build, source, and run circuits across 750+ carriers every day. The NOC grew out of that work. It knows how carrier escalations move and when to push. Your circuits get that experience, whoever delivered them, and your team gets its nights back.

HIGHLIGHTS

24/7/365 circuit monitoring, holidays included

US-based engineers on every call and ticket

Circuits from any carrier, including ones Momentum didn't deliver

Break-fix ownership from open ticket to restored service

Faults found and ticketed before users call

Outage reporting that makes recurring problems easy to spot

Find out what your circuits aren't telling you

Talk to a Momentum expert about Network Monitoring.

NETWORK MONITORING

What comes with Momentum network monitoring

24/7/365 NOC

US-based engineers watch every circuit around the clock, including holidays and weekends.

Custom alerting

Thresholds, contacts, and escalation paths are set per circuit to match how your business runs.

Third-party circuits

Circuits from other carriers are monitored alongside the ones Momentum delivers.

Carrier ticket management

Momentum opens, escalates, and tracks every ticket with the carrier until service is restored.

Break-fix coordination

Engineers coordinate carrier dispatch, testing, and turn-up after every repair.

Outage reporting

Every fault is documented with its timeline, so recurring problems on a circuit are easy to spot.

Why Momentum?

750+

CARRIERS AND
SERVICE PROVIDERS

36K

ENTERPRISE
LOCATIONS SERVED

8,000+

MANAGED NETWORK
SOLUTIONS

Put a NOC on every circuit before the next outage

Send us your circuit list, and we'll show you how Momentum takes over monitoring and break-fix.
